# For you confidence - our recommendations:

## Software Solution Provider, Norway

COO

"They're devoted, proficient developers that have mastered their technology and domain."

## Mondeca, France

Stephane Senkowski, CEO

"We can tell them to do it this way, but they'll propose a better idea if they have one."

## Coders Co., The Netherlands

Gosia Wrzesinska, CEO

"They collaborate with you to find the best solutions to your problems, both technical and non-technical."

## Startup, The Netherlands

Peter Kloprogge, Co-Founder

"I was impressed by their understanding of our business leading to a more cooperative approach."

# In what areas can we help you?

## Software Custom Development

Personalized software, created based on your expectations and business needs.

- You are able to modify it at the right moment, and scale company to its needs.
- Perfect solution if you need a tailor-made software completely suit to your business needs.
- By choosing custom software, the technology adapts to the needs of your organization.

## Cloud Services

Only cloud services can provide your business with the scalability, uptime, and access to resources you need to grow.

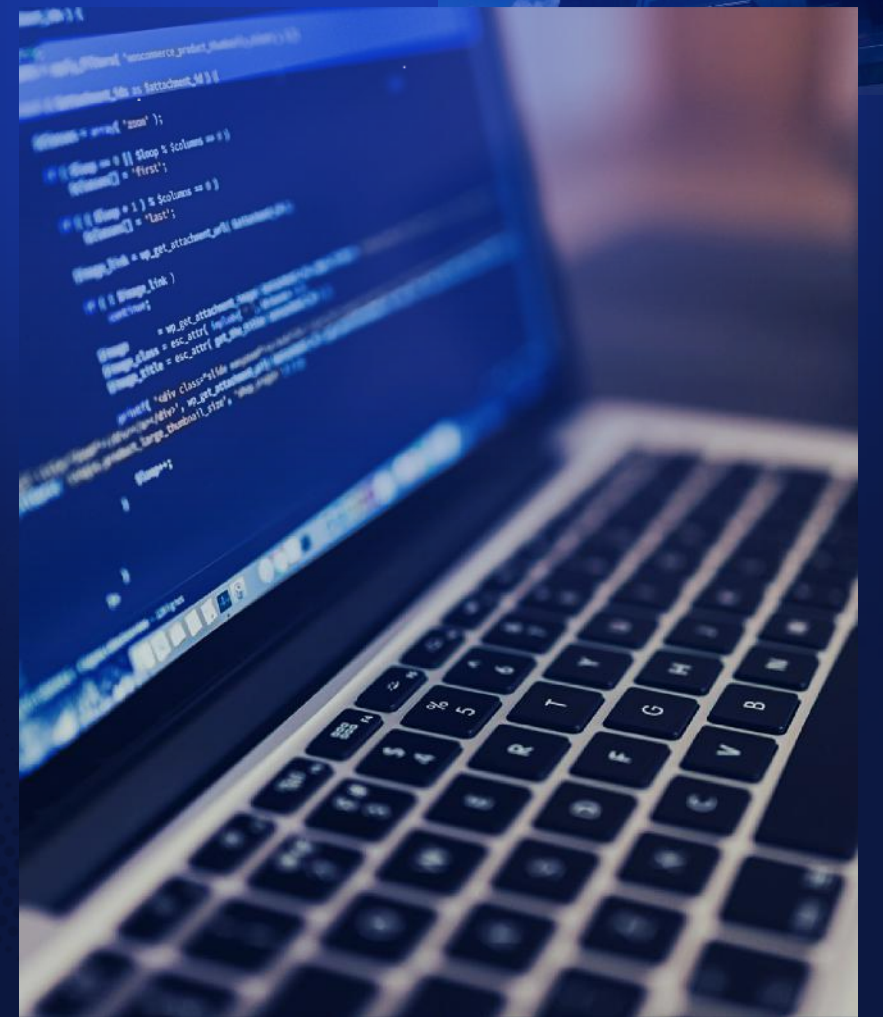

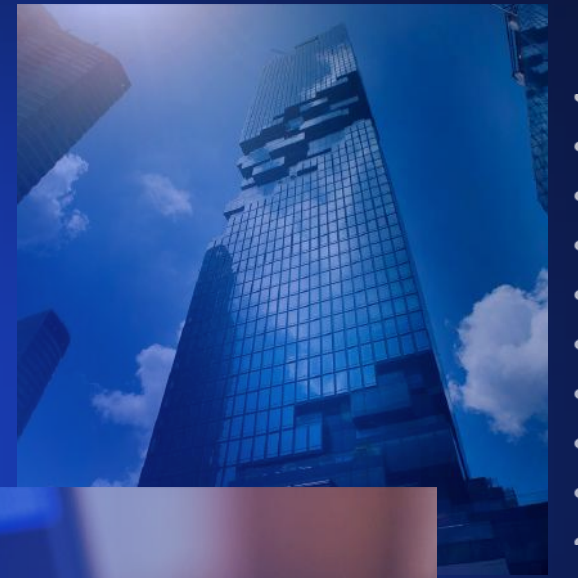

- Key benefits are: scalability, cost-efficiency, easy deployment .
- Cloud services offer an excellent cost vs. performance balance at the same time.

## Product Design

A combination of improving the aesthetics of a product, the functionality, and the performance.

- You can lower your costs, improve performance, durability, increase sales of your products or services and finally - improve market position.
- It serves technical purposes such as documentation for production or new technologies.

# Technologies that will contribute to your success:

AKKA

BIGQUERY

NODE.JS

FIREBASE

ELASTIC

BIGTABLE

D3.JS

MARIADB

KAFKA

ANTHOS

GRAPHQL

COCKROACHDB

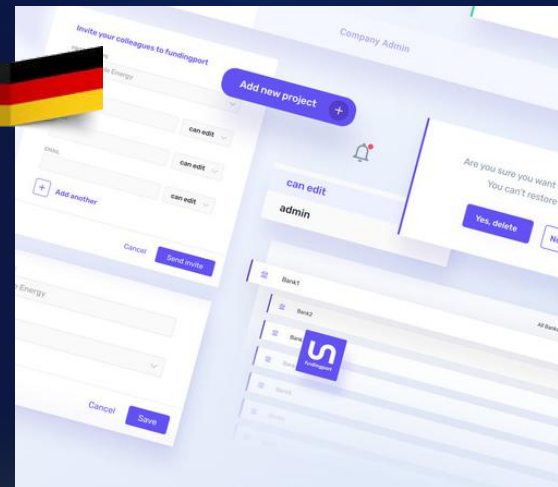

# Implementation examples:

look what we have been working on

## Smart Fintech Platform

Stepwise built from scratch a SaaS platform that supports loan and credit businesses with the use of a decision-facilitating and scoring engine. We created a fully scalable SaaS platform, which is now successfully implemented by 4 end clients. We have conducted complex integrations with 3rd party solutions offering risk assessment and borrower verification services.

## Renewable Energy funding acquisition portal

The goal was to create a sophisticated and ambitious SaaS platform targeted at the broadly understood Renewable Energy sector on the German market. The solution - connect the world of private investors and local businesses with the world of finance and corporations ready to invest in a sector of the economy. Project led by Stepwise from scratch and touching all the process development areas.

## Smart Integration Platform for Digital Utilities

Greenbird has come up with a concept to help Utilities optimize their traditional grid operations, which so far have been largely dependent on the outdated IT architecture and lengthy system integrations outsourced to external partners. Stepwise team helps mainly with core system development, DSL based on Kotlin, Java, GCP, Spring Boot and Akka tech stack.

---

# Why do you exactly need digital transformation?

Digital Transformation is business transformation, and organizations must evolve to meet changing trends, business requirements and competition.

Organizations that undergo digital transformation:

- shorten the distance between them and their customers,
- increase the pace of innovation
- and at the same time the share of profits in their industry.

Digital Transformation is crucial for business growth.

The time is slowly coming when only those organizations that undergo digital transformation will be successful, do you want to be among them?

---

# How can you start the process of transformation?

- 1 We always recommend to [validate your digital product idea](#).  
(It can be market research, research on available solutions or analysis of the needs of potential application users.)
- 2 We advice [preparing a proof-of-concept](#) (or an audit) at the start.
- 3 Next step (within 2-4 months) is [creating a MVP \(Minimum Viable Product\)](#).

They take relatively little time and resources, require much less investment than creating the final digital product, and provide a lot of valuable information, thanks to which you can make the right decisions regarding the further development of a dedicated digital product.

# Why will your business reach a higher level with us?

## Because of people:

- Diverse team - technical and soft skills people
- Definitely every person is a business person
- We learn and teach each of our clients
- Our team expects others to follow the best coding and design standards
- We care for transparency, quality and constantly experiment with technology
- Technical team, recruits technical people
- Our team is fully multidisciplinary

## The processes we use:

- Pair Programming
- Agile Approach
- Test-driven development (TDD)
- Democracy in Technology

Everything for your comfort and sense of security!

---

# We are ambitious too - we develop with you:

## Plan for 2021:

---

- Constant Growth and development
- Team ^30%

## Areas in which we want to develop and grow:

---

- Cloud services as a base - absolute specialization
- Data Driven concept - the role of a mentor
- Cloud Native Experts
- Business Processes Automation trend setters

## New directions:

---

- Exploring knowledge in the field of Machine Learning
- We will see which aspects of technology will captivate us :)
